

# PROPOSED CONSTRUCTION TRAFFIC ROUTING

It is proposed that the construction route to the site will be taken from the A688 with those accessing the northern parcels doing so from the west and those accessing the southern parcel doing so from the east. Construction traffic will not need to travel through surrounding villages. This is shown on the 'Construction Vehicle Route Plan' below.

During construction there will typically be around 10 HGV deliveries per day in addition to construction staff movements.

A Construction Traffic Management Plan (CTMP) will be submitted with the planning application to manage construction traffic which is estimated to last for around a 24 week period.
